NEW PRODUCT INTRODUCTION

3M Paint Preparation System

The 3M™ Paint Preparation System replaces traditional paint mixing cups and filters and drastically reduces the amount of solvent required for gun cleaning.

3M™ Paint Preparation System is a unique, closed paint system which eliminates the need for separate mixing cups and filters. Instead, paint is mixed in a liner bag which marries to a direct filter and is then mounted on the spray gun with a dedicated adapter. As freshly filtered stain or paint is dispensed, the liner bag collapses, allowing the spray gun to function at any angle. Liner bag and filter are disposable, leaving only the spray gun and adapter to be cleaned. 3M™ PPS is therefore a cleaner, faster system, safe from outside contamination and offering considerable time and solvent savings on gun and parts cleaning.

- Only one 3M™ PPS cup for mixing and spraying
- Closed system - no outside contamination
- Up to 70% savings of cleaning solvent
- Less operator exposure to solvents and reduction in VOCs
- Faster system - from mixing to disposal
- Spray gun functions at any angle
