## TIP OF THE MONTH

### Refinishing

Refinishing is complex; If you must do it ... the following would apply:  
The first step is to clean the entire surface with a wax cleaner before starting anything.  
If you are sanding or stripping back to the bare wood, the previous cleaning will avoid the surface contaminants from penetrating into the substrate.  
It's also going to prevent using anti-fish eyes eliminator which should be used only in the last coat anyway.  
Clean off wax remover  
Sand or strip  
Neutralize the stripper by cleaning with lacquer thinner several times and with a new rag every time.  
Let dry for 24 hours  
Sand  
Stain  
Wash coat: 1 sealer to 3 thinners (none active) 15 minutes dry then lightly scuff  
Normal coat of sealer 60 minutes dry  
Sand 320  
Top coat  
Sand 320  
Top coat with 0.5% anti-silicone if needed
