

3M™ 735U Hookit™ II Discs

The new standard in paper discs for furniture, custom woodworking, and cabinet shop applications.

3M™ 735U Regalite Hookit™ II paper is the latest addition to 3M's industry leading Purple family of products. 735U features 3M's Cubitron™ abrasive blended with a special aluminum oxide mineral, resin bonded onto a tough durable "C" wt. paper backing. The sharp cutting ability and fine finishing characteristics make it ideal for sanding furniture, cabinets and coated surfaces.

Hookit II Discs

Standard stock in 5" without holes

Grades Available

P80 (#51240), P100 (#51241), P120 (#51242), P150 (#51243), P180 (#51244), P220 (#51245)

3M Hookit II Abrasives - You're going to get hooked on it!

You may think that all hook and loop attachment systems are the same. If you do, it's only because you haven't tried 3M™ Hookit™ II Abrasives. Here's how they're different.

How it works

The "hooks" have been replaced by the 3M-patented capped stems for secure attachment and easy release. These stems are on the disc side rather than the pad to add strength and durability while maintaining flexibility, they are also in a special pattern to enhance the product's performance in producing finer, more uniform finishes. The stems are part of the disc's film backing so the attachment system will not easily separate from the abrasive.

The Results

Long lasting

- Discs can last up to four times longer
- Backup pads can last two to three times longer
- Improved tear resistance

Less Rework

- Produces a finer, more uniform finish
- Reduced potential for airborne contaminants (i.e., lint common to looped-backed abrasives)
- Less swirl marks
